## Two brothers – one team – the top product

We, Stefan and Heiko Hassler, two brothers from the company HACA Leitern, have founded together with our dedicated team the company Hassler & Hassler GmbH u. Co. KG located on the premises of our family company Lorenz Hasenbach GmbH u. Co. KG (HACA).

### **How does this fit together?**

More than 130 years of experience, affectionate family tradition and well-grounded know-how in combination with fresh, new and own ideas of a younger generation, have generated a totally new range of products only available for the specialised trade. And all of this is united „under one umbrella“.

### **That is how the brand Rise-Tec was born.**

With the brand Rise-Tec we want to combine the known quality standard of HACA Leitern with new innovations.

Rise-Tec are aluminum ladders for the professional but also private use, being even more safe, even more stable and even more long-lasting.

### **Our stile profile is the key!**

The previous standard stile of a ladder is a rectangular hollow profile. But there are other shapes, granting way more resistance against dents and buckles. We used this to our advantage in order to offer a higher safety against rupture.

We call this the „Punch-Resist-Effect“!

These profiles, which are unique in Germany, became the basis for our products.

3

### **How does the Punch-Resist-Effect present itself in practice?**

If you work with ladders daily you will surely know, how often it happens; a tool or component falls onto the ladder stile, the ladder slips and hits an edge or the stile gets a shock during transport.

Have you as well been astonished how deep a dent or buckle can be from such an impact?

Did you also know that at that spot, with conventional, rectangular aluminum stile profiles, the ladder structure is weakened and can break some day without any warning?

Often you do not pay attention to it and just go on – with the correspondent risk of an accident. The consequences can be damages to persons and property and work stoppage. Furthermore, often liability insurances and employers' liability insurance associations have to be involved as well.

Contrary to that, with the „Punch-Resist-Effect“, which results from the shape of our innovative stile profile, we have achieved that a Rise-Tec ladder remains stable, in the truest sense of the word.

Damages caused by tools or shocks, as described above, are normally endured without essential weakening of the aluminum structure, so you can proceed with work safely!

Rise-Tec Leitern – Da steh' ich drauf!

Heiko Hassler

Stefan Hassler

## Red Label

The ladder for professional use at an affordable price.

The double delta profile, which is unique in Germany, combined with a special aluminium alloy makes it possible to use it under special loads. The profile is used for the stepladders of the Red Label. For the rung ladders of this series we also use a specially developed double T-profile

Both profiles increase resistance to dents and buckles because of the **PUNCH-RESIST-EFFECT**

Rung dimension  
35x35mm

double-T-profil

double-Delta-profil

Manufactured in accordance with DIN EN 131, they correspond to the „**Professional class**“.

In terms of stability and longevity, the standard specifications are even exceeded by far.

A reliable „colleague“ for your professional life.

4

### Red Label is available in the following variants:

step ladder:

- stepladder with safety bridge and storage tray
- steps in various widths

rung ladder:

- 1-part leaning ladder
- 2-part leaning ladder
- 2-part combination ladder
- 3-part combination ladder

### Benefi -increasing details:

- resistance against dents and buckles with the **PUNCH-RESIST-EFFECT**
- extra wide rungs (35x35mm) and 80mm steps for comfortable, safe standing
- rungs and steps with ribbing increase the slip resistance
- flanged connection from stile to rung and step as a permanently stable connection
- extremely anti-slip ladder feet, replaceable after wear and tear

### Accessories:

- handrails for stepladders
- safety steps for stepladders increase the standing area to 130mm and are simply clipped on.
- brake rollers for footsteps
- safety bar for steps
- hooks and suspension devices for stepladders

## Step ladder with safety bridge 8616

**Red Label**

- one sided
- highest stile stability against buckling
- useful storage tray for assembly material, tools, etc.
- ergonomically designed aluminium stiles
- very appealing design
- platform 33.5x25.5cm
- step depth 80mm

## Yellow Label

Our inexpensive aluminum ladders „Yellow Label“: ideal for the demanding user for hobbies, at home, in the office and for occasional use.

The Yellow Label is purely a rung ladder series. The C-profile used here increases the resistance to dents and buckles because of the **PUNCH-RESIST-EFFECT**

C-profil

Manufactured in accordance with DIN EN 131, they correspond to the „Professional class“.

**Yellow Label is available in the following variants:**

- Ladders with rungs
- 1-part single ladder
- 2-part single ladder
- 2-part combination ladder

**Benefi -increasing details:**

- resistance against dents and buckles because of the **PUNCH-RESIST-EFFECT**
- rungs and steps with ribbing increase the slip resistance
- the rungs have a dimension of 30x30mm
- flanged connection from stile to rung as a permanently stable connection
- extremely anti-slip ladder feet, replaceable after wear and tear
- light weight

# 1-part rung leaning ladder 8007

**Yellow Label**

- made of strong aluminium C-stile-profile
- robust aluminium rungs with a depth of 30mm
- highest stile stability against buckling
- outer ladder width 400mm
- clear width 350mm
- rung dimension 30x30mm
- rung distance 300mm

article number	amount of rungs	length of stile (cm)	length of the stabiliser (cm)	weight (kg)
8007000006	6	180		2.4
